Black Hills National Forest Large Fire History 1910-2009

Grizzly Gulch Fire Deadwood

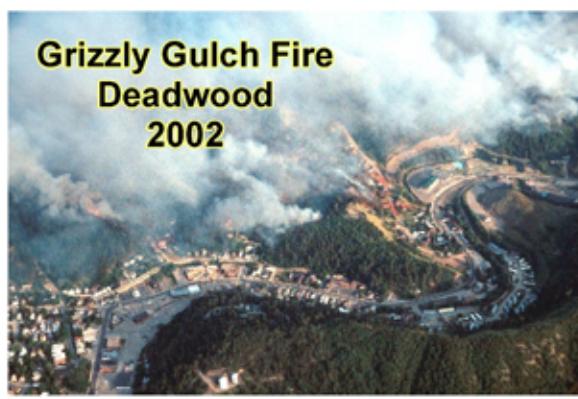

Figure 2 - View of the Deadwood fire looking north at about 3:00 p.m. on September 8, 1959 just before passage of the cold front. This portion of the fire destroyed nearly 100% of the timber in its path and burned to the edge of Deadwood on the NW side of town.

With the cold front passage at about 3:30 p.m. the fire crossed the valley to the NE and SW of Deadwood burning forest products plants at both these crossings; burned over the approximate areas shown by the dotted line.
